HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Patricia A. Verlangieri on 9/20/2011.

The application has been amended as follows:

Please cancel claim 13.

2. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to an image display screen of the type based on electroluminescent organic material with thin film that simpler and more economical to produce.

Independent claim 1 identify at least the uniquely distinct features of having modulation transistors and associated compensating transistor that are fabricated on a polycrystalline silicon substrate obtained by heating an amorphous silicon substrate using a laser beam, polycrystalline intended first to

heat a first rectangular heating surface of the substrate, then to move in a direction of movement and then to heat a second rectangular heating surface, and wherein said modulation transistors associated with the light emitters of a given column and the associated compensating transistor are aligned in one and the same heating surface, the guiding alignment line extending approximately perpendicularly to the direction of movement of the laser beam.

Koyama et al. (US 2003/0107534 A1) teach an EL display device that converts an inputted analog signal voltage into a current and converting the current into gate-source voltage of correction TFT that has the same polarity as a driving TFT, supplying the gate-source voltage as a source line signal to a source signal line, and applying the source line signal to a gate electrode of the driving TFT to emit light at a luminance linearly corresponding to the inputted analog signal voltage.

Hatano et al. (US 2004/0017365 A1) teach an image display device that has an active matrix substrate provided with a drive circuit formed of high-performance active elements such as thin film transistors which operate with high mobility for driving pixel sections arranged in a matrix configuration.

Lo (US 6,937,215 B2) teaches a Pixel driving circuit of an organic light emitting diode display panel that includes a scan TFT, a Vdd-connected TFT, a driving TFT, a diode-connected TFT, a storage capacitor, a reset TFT, an OLED-

connected TFT, and an organic light emitting diode to improve non-uniform image defect.

However, none of the references singly or in combination teaches the uniquely distinct features as described above in combination with various other elements recited in the claim.

Therefore, the claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to YONG H. SIM whose telephone number is (571)270-1189. The examiner can normally be reached on Monday - Friday (Alternate Fridays off) 7:30-5:00.
